

Where each and every one of our patients is our highest priority

It is our goal to provide with you the best treatment possible for long lasting dental health in a comfortable and relaxing environment, where you feel safe, understood, and treated with compassion.

By learning about your needs, we want to partner with you to explore various treatment options that are right for you. This allows us to present you with a transparent, evidence based and medically sound therapy to ensure the highest quality of dental health that is affordable.

We aspire to offer you a clear path to success through open communication and by addressing any concerns and anxieties you may have.

We are an innovative, compassionate, and well-organized team committed to your comfort and success.

New Patient Information

Welcome to our dental offices!

Your first visit is a wonderful opportunity for us to get to know you. We will dedicate our attention to your needs and your special requests and will present you with a comprehensive diagnosis.

Here is some initial information:

If you possess any data or images from previous treatments or visits, kindly bring these with you.

Registration: all paperwork can be filled in from the convenience of your home. Please download our registration form our homepage (under Downloads) and enter all data. You can bring the form to your appointment, or you are welcome to email the scanned pdf-document to formular@linseisen.bayern
If you prefer to handle all paperwork upon arrival in our office, kindly allow an additional 10 min prior to your appointment.

Appointment: We will reserve time for you. When you call, we will make a binding appointment. When scheduling, please indicate the reason for your visit so we can reserve an adequate time slot for you. This will allow us to reduce waiting times to a minimum. If you need to cancel, please call in advance so we can release your time slot and give to another patient.

Emergency care: Please always call ahead even in case of urgent care. If necessary, we can reserve a same-day appointment for you. This will avoid unnecessary wait time for you and will not challenge our carefully crafted appointment system.

Hygiene services: We have our own prophylaxis department with its own scheduling system. This allows you to schedule a hygiene appointment separately from your examination. If you wish to combine both visits, please indicate so when calling in.

Accessibility: Our dental office is located in a historic building and we have installed an elevator for easier access. However, outside the building are two stairs. If you require assistance for these two stairs, kindly advise upon scheduling the appointment. Once you arrive at the office, please give us a call and two people will come downstairs to assist you to get inside the building. No problem!

Austrian Patients: Many Austrians choose to come here and are our patients. Our invoices are reasonable and can be submitted to your local health care provider/insurance for payment or reimbursement. Give it a try!

Our differentiators

This is how we set us apart from our dental offices.

- **6 state-of-the-art treatment rooms** (Our optimized time management allows us to treat several patients simultaneously and keeps waiting times to a minimum.)
- **In-house laboratory**. (Dental prosthesis made in Passau. Our technicians are close to patient care and any repair work and modifications can be done quickly and on site. The imprint for necessary molding will be digitally scanned in-house and can be submitted instantly to the milling center at Attersee/Austria)
- **Access to world-renown experts because hygiene MATTERS**. (We are one of the test centers for Dentsply-Sirona (world largest manufacturer of dental instruments) and are testing their sterilizers on our rotating instruments. Our lead dental assistant Manuela Wimmer routinely advices and consults other clients of Dentsply-Sirona for Hygiene at the International Dental Convention in Cologne)
- **Paperless data repository**. All patient data is securely maintained in-house and immediately accessible. Our trained staff can address any billing questions and reduces patients needing to contact a third-party vendor.
- **Internal IT-department**. (Our office is supported by several own servers for daily, and in addition to weekly and once a month data back-up - no cloud! Your data maintained securely and immediately by our onsite IT administrator).
- **Laser**. This advanced technology permits us to treat auxiliary of periodontal disease and canker sores/aphtha or herpes
- **Airflow**. A pressurized mixture of water and tiny powder particles is being pushed through the airflow-device for top-tier dental cleaning. This removes dental deposits and tough stains and ensures excellent dental hygiene. This technique preserves dental enamel, will not damage your teeth, and improves your dental brightness.
- **Digital x-ray**. Digital x-ray reduces radiation up to 80%. It uses extremely sensitive sensors and requires less light exposure than a traditional x-ray film. This digital x-ray imaging improves our ability to identify cavity not only between each tooth but also below the tooth surface. Digital images have a higher resolution compared to traditional X-ray images and are more detailed and reliable.
